Predictable. Targeted. Established.™

Embosphere[®]

Microspheres

PREDICTABLE

Embosphere Microspheres temporarily compress up to 33% for smooth microcatheter passage. Once through the microcatheter, they return to their original spherical shape and stated diameter for predictable, reliable delivery.¹

TARGETED

Embosphere Microspheres show a direct correlation between the level of arterial occlusion and the size of the particles used, allowing for consistent and reliable targeted occlusion.^{2,3}

ESTABLISHED

Embosphere Microspheres are the most clinically studied and clinically utilized spherical embolic, having been proven:

- In over 350,000 procedures⁴
- With +20 years' clinical experience⁴
- In more than 200 clinical articles⁴

Non-Aggregating Properties

The hydrophilic surface and spherical shape of Embosphere Microspheres prevent aggregation in the catheter lumen and vasculature.

Superior Rebound Capability

Embosphere Microspheres' elastic properties allow temporary compression of up to 33% to facilitate smooth microcatheter passage (A).¹ Once through the microcatheter, Embosphere Microspheres return to their original spherical shape and stated diameter (B) for predictable, targeted delivery.¹

With Embosphere Microspheres, **92.3% of patients experienced 100% infarction** of their entire uterine fibroid tumor burden.

Durable Occlusion

Embosphere Microspheres are biocompatible and nonresorbable with cell adhesion properties that enable complete and durable mechanical occlusion.

Embosphere Microspheres at six months (A) and six years (B) after embolization of facial AVM.

Percentage of Patients with Complete Infarction Rates of Overall Uterine Fibroid Tumor Burden

Complete infarction of all fibroids leads to better long-term clinical outcomes, including a higher rate of symptom control and a lower rate of additional gynecologic intervention compared with incomplete infarction of fibroid tissue.⁸

ORDERING INFORMATION

SYRINGES

Syringe Size Range (µm)	Color Code	1 mL Syringe Product Number	2 mL Syringe Product Number
50-100 	Gray	--	S020GH NEW
40-120 	Orange	--	S120GH
100-300 	Yellow	S210GH	S220GH
300-500 	Blue	S410GH	S420GH
500-700 	Red	S610GH	S620GH
700-900 	Green	S810GH	S820GH
900-1200 	Purple	S1010GH	S1020GH

Embosphere Microspheres supplied in sterile saline in 20 mL syringe. Sold 5 per box.

VIALS

Vial Size Range (µm)	Color Code	1 mL Vial Product Number	2 mL Vial Product Number
40-120 	Orange	V110GH	V120GH
100-300 	Yellow	V210GH	V220GH
300-500 	Blue	V410GH	V420GH
500-700 	Red	V610GH	V620GH
700-900 	Green	V810GH	V820GH
900-1200 	Purple	V1010GH	V1020GH

Embosphere Microspheres supplied in sterile saline in 8 mL vial. Sold 5 per box.

SPECIFIC SIZE RANGES

Embosphere Microspheres are available in seven specific size ranges to achieve predictable and efficient vessel occlusion.
